

### Benefits for Investors

- The number of tokens that will be need to be locked will depend on the terms & conditions of the smart contract.
- While we lock tokens, the circulating supply will decrease so the value of the SHA DA(digital assets) will increase.
- Without the SHA DA's, our eco-system will not function.
- In order for legal entities to subscribe to our TAN, they must lock up a certain amount of SHA DA for 365 days.
- Locked SHA will become inheritable as soon as the conditions of the associated smart contracts are fulfilled, and by doing this SHA will become the worlds first inheritable Digital Asset!
- Tokens locked for our Investment Circle will be distributed amongst all stakeholders from the moment that all associated smart contracts conditions are fulfilled.
